F.2 Transportation – Transit Ridership and Vehicle Miles Travelled Under Alternative Land Use Assumptions

BART TO LIVERMORE EXTENSION PROJECT EIR
APPENDIX F: TRANSPORTATION
F.2 TRANSIT RIDERSHIP AND VEHICLE MILES TRAVELLED
UNDER ALTERNATIVE LAND USE ASSUMPTIONS

JULY 2017

APPENDIX F.2 TRANSIT RIDERSHIP AND VEHICLE MILES TRAVELED UNDER ALTERNATIVE LAND USE ASSUMPTIONS

A. INTRODUCTION

This appendix compares project and land use alternatives of specific interest to the City of Livermore relating to land use assumptions under No Project conditions that were not considered in the main body of the BART to Livermore Extension EIR. Specifically, this appendix compares the scenarios of the main body of the EIR, which assume land uses associated with Plan Bay Area projections, to a scenario that assumes a different set of land uses in Livermore – those reflecting the Livermore General Plan. Transit ridership and vehicle miles traveled are presented below.

B. ALTERNATIVES

For the 2025 forecast year, four project + land use alternatives were compared against a No Project alternative (No Project + Existing Livermore General Plan Zoning):

- Proposed Project (Conventional BART) + Isabel Neighborhood Plan (INP) zoning
- DMU Alternative + INP zoning
- Express Bus / BRT Alternative + Existing Livermore General Plan zoning
- Enhanced Bus Alternative + Existing Livermore General Plan zoning

For the 2040 forecast year, four project + land use alternatives were compared against a No Project alternative (No Project + Existing Livermore General Plan Zoning):

- Proposed Project (Conventional BART) + INP zoning
- DMU Alternative + INP zoning
- Express Bus / BRT Alternative + Existing Livermore General Plan zoning
- Enhanced Bus Alternative + Existing Livermore General Plan zoning

C. TRANSIT RIDERSHIP

1. Results

Systemwide average weekday transit ridership estimates are provided for four transit operators below:

- BART
- Altamont Corridor Express (ACE)
- Livermore Amador Valley Transit Authority (LAVTA)
- San Joaquin Regional Transit District (RTD)

TABLE 1: TRANSIT RIDERSHIP (WEEKDAY BOARDINGS), BY OPERATOR (CHANGE FROM NO PROJECT)

Scenario	Operator			
	BART	ACE	LAVTA	RTD
2025				
No Project	472,200	5,600	10,400	370
Conventional BART + INP Zoning	479,600 (+7,400)	4,600 (-1,000)	10,800 (+400)	30 (-340)
DMU Alternative + INP Zoning	478,000 (+5,800)	4,700 (-900)	11,200 (+800)	70 (-300)
Express Bus/BRT Alternative + Existing Livermore General Plan	473,900 (+1,700)	5,500 (-100)	11,700 (+1,300)	60 (-310)
Enhanced Bus Alternative + Existing Livermore General Plan	472,200 (0)	5,600 (0)	10,700 (+300)	360 (-10)
2040				
No Project	657,300	6,900	14,500	340
Conventional BART + INP Zoning	670,700 (+13,400)	5,500 (-1,400)	15,400 (+900)	50 (-290)
DMU Alternative + INP Zoning	665,600 (+8,300)	5,900 (-1,000)	15,700 (+1,200)	50 (-290)
Express Bus/BRT Alternative + Existing Livermore General Plan	660,800 (+3,500)	6,600 (-300)	17,000 (+2,500)	70 (-270)
Enhanced Bus Alternative + Existing Livermore General Plan	657,300 (0)	6,900 (0)	14,700 (+200)	340 (0)

Notes:

Ridership refers to the number of linked trips on each respective transit system; a passenger boarding the Dublin/Pleasanton-Daly City line at the Dublin/Pleasanton Station and transferring at the Coliseum Station to the Richmond-Fremont line would count as one trip on BART.

ACE ridership numbers only include boardings in San Joaquin County and the Bay Area. These numbers do not reflect boardings along potential future ACE extensions into Stanislaus and Merced Counties.

Source: Cambridge Systematics, 2017. BART to Livermore Ridership Projections (Draft). July

*Source for 2016 Existing Conditions data: BART, 2016.

2. Discussion

The Proposed Project results in the highest increases to BART ridership in both 2025 and 2040, reflecting the relatively high appeal of a direct connection to the BART system from the Isabel area that eliminates the need for additional transfers. In 2040 the Proposed Project generates 13,400 more BART trips compared to the No Project scenario. The ridership increase is partly due to extending BART to Livermore and partly due to the intensified land use from the INP. The DMU Alternative is less attractive as a rail option due to the required transfer at the Dublin/Pleasanton Station, and adds fewer new BART trips (8,300) in 2040. The Express Bus/BRT Alternative adds even fewer BART trips (3,500). While the bus-only lane on I-580 enables faster travel times than buses traveling with other traffic, the bus service is still less attractive than rail and requires a transfer at the Dublin/Pleasanton Station for entrance into the BART system. The Express Bus/BRT Alternative also assumes a continuation of zoning consistent with the existing Livermore General Plan, and does not benefit from the intensified land use from the INP. Finally, the Enhanced Bus Alternative results in negligible changes in BART ridership, a reflection of the lower reliability and speed of bus service on surface streets compared with exclusive transit-ways as well as continuation of zoning consistent with the existing Livermore General Plan.

ACE ridership is expected to drop under the Proposed Project and DMU Alternative, as some ACE riders traveling to southern Alameda County and Santa Clara County who might have taken BART once it's extended to Santa Clara County, but are unable to find parking at Dublin/Pleasanton BART station, would choose to park at the new Isabel station and take BART/DMU instead. For the same reason, RTD ridership would also drop under multiple build alternatives. LAVTA ridership is expected to increase under the Proposed Project and DMU Alternative, as extended rail service increases the draw of connecting bus service. The intensified land use from the INP also increases LAVTA ridership. LAVTA ridership is expected to increase the most under the Express Bus/BRT Alternative, as the assumed LAVTA bus routes using the I-580 express lanes and direct bus-only ramps to the Dublin/Pleasanton Station would attract some of the riders that would have taken the extended rail service.

D. VEHICLE-MILES TRAVELED

1. Results

Reductions in vehicle-miles traveled are presented below (VMT), compared to the No Project scenario for each forecast year:

TABLE 2: VMT REDUCTIONS SUMMARY, AVERAGE WEEKDAY

Scenario	Auto VMT Reduction Compared With No Project Conditions	Bus VMT Increase Relative to No Project Conditions	Total VMT Reduction
2025			
Conventional BART + INP Zoning	112,900	1,900	111,000
DMU Alternative + INP Zoning	65,000	1,900	63,100
Express Bus/BRT Alternative + Existing Livermore General Plan	40,000	2,700	37,000
Enhanced Bus Alternative + Existing Livermore General Plan	5,100	2,600	2,500
2040			
Conventional BART + INP Zoning	294,900	1,900	293,000
DMU Alternative + INP Zoning	186,600	1,900	184,700
Express Bus/BRT Alternative + Existing Livermore General Plan	86,900	2,700	84,200
Enhanced Bus Alternative + Existing Livermore General Plan	500	2,600	(2,100)

Source: Cambridge Systematics, 2017. BART to Livermore Ridership Projections (Draft). July

2. Discussion

The Proposed Project and all Build Alternatives result in VMT reductions compared with No Project Conditions, except for the Enhanced Bus Alternative in 2040. The Proposed Project results in the highest VMT reductions; by attracting the most new BART riders, it reduces auto vehicle trips the most. The DMU Alternative has the second-highest amount of VMT reductions – a lower reduction than under the Proposed Project, likely because this Alternative requires passengers starting at the Isabel DMU station to transfer at the Dublin/Pleasanton Station, whereas under the Proposed Project, passengers don't need to transfer. Express Bus/BRT provides the next highest VMT reduction, as bus service is less attractive to transit riders than rail service. The Express Bus/BRT Alternative also does not benefit from the intensified land use associated with the INP, and assumes a continuation of the less intense land use allowed under zoning consistent with the existing Livermore General Plan.

The Enhanced Bus Alternative results in negligible VMT reductions. The difference in VMT reduction under the Express Bus/BRT Alternative and the Enhanced Bus Alternative may be because while the Enhanced Bus Alternative includes improvements to bus service, it does not provide any major capital improvements to improve bus travel times and results in fewer additional transit riders. VMT reductions under the Enhanced Bus Alternative for 2040 are especially minor, eclipsed by the increase in the bus VMT (due to the bus service improvements proposed under the Alternative) – overall leading to a small increase in VMT for 2040 project conditions. It is the only scenario under which there is an increase in VMT.

G.3 Noise Model Data – Construction Noise Calculations

FTA General Noise Assessment Calculations for Construction Equipment

Underlying Equation from FTA Guidance Page 12-3

$$Leq(equip) = E.L. + 10 \log(U.F.) - 20 \log(D/50) - 10G \log(D/50)$$

where: Leq (equip) = the Leq at a receiver resulting from the operation of a single piece of equipment over a specified time period
 E.L. = the noise emission level of the particular piece of equipment at the reference distance of 50 feet, taken from Table 12-1
 G = a constant that accounts for topography and ground effects, taken from Figure 6-5 (Chapter 6)
 D = the distance from the receiver to the piece of equipment, and
 U.F. = a usage factor that accounts for the fraction of time that the equipment is in use over the specified time period.

For general assessment, FTA identifies the following assumptions:

1. Full power operation for a time period of one hour is assumed because most construction equipment operates continuously for periods of one hour or more at some point in the construction period.

Therefore, U.F. = 1, and $10 \log(U.F.) = 0$

Hence, the Equation simplifies to: $Leq(equip) = E.L. - 20 \log(D/50) - 10G \log(D/50)$

2. Free-field conditions are assumed and ground effects are ignored. Consequently, $G = 0$.

Hence, the Equation further simplifies to: $Leq(equip) = E.L. - 20 \log(D/50)$

Solving for distance (D) yields: $D = 50 * 10^{(Leq - E.L.) / -20}$

Equipment	E.L. (from Table 12-1)	Leq at Distance
		370 feet
Forklift	84 dBA. Leq	66.6

FTA General Noise Assessment Calculations for Construction Equipment

Underlying Equation from FTA Guidance Page 12-3

$$Leq(equip) = E.L. + 10 \log(U.F.) - 20 \log(D/50) - 10G \log(D/50)$$

where: Leq (equip) = the Leq at a receiver resulting from the operation of a single piece of equipment over a specified time period
 E.L. = the noise emission level of the particular piece of equipment at the reference distance of 50 feet, taken from Table 12-1
 G = a constant that accounts for topography and ground effects, taken from Figure 6-5 (Chapter 6)
 D = the distance from the receiver to the piece of equipment, and
 U.F. = a usage factor that accounts for the fraction of time that the equipment is in use over the specified time period.

For general assessment, FTA identifies the following assumptions:

1. Full power operation for a time period of one hour is assumed because most construction equipment operates continuously for periods of one hour or more at some point in the construction period.

Therefore, U.F. = 1, and $10 \log(U.F.) = 0$

Hence, the Equation simplifies to: $Leq(equip) = E.L. - 20 \log(D/50) - 10G \log(D/50)$

2. Free-field conditions are assumed and ground effects are ignored. Consequently, $G = 0$.

Hence, the Equation further simplifies to: $Leq(equip) = E.L. - 20 \log(D/50)$

Solving for distance (D) yields: $D = 50 * 10^{(Leq - E.L.) / -20}$

1. Full power operation for a time period of one hour is assumed because most construction equipment operates continuously for periods of one hour or more at some point in the construction period.

Therefore, U.F. = 1, and $10 \log(U.F.) = 0$

Hence, the Equation simplifies to: $Leq(equip) = E.L. - 20 \log(D/50) - 10G \log(D/50)$

2. Free-field conditions are assumed and ground effects are ignored. Consequently, G = 0.

Hence, the Equation further simplifies to: $Leq(equip) = E.L. - 20 \log(D/50)$

Solving for distance (D) yields: $D = 50 * 10^{(Leq - E.L.) / -20}$

FTA General Noise Assessment Calculations for Construction Equipment

Underlying Equation from FTA Guidance Page 12-3

$$Leq(equip) = E.L. + 10 \log(U.F.) - 20 \log(D/50) - 10G \log(D/50)$$

where: Leq (equip) = the Leq at a receiver resulting from the operation of a single piece of equipment over a specified time period
 E.L. = the noise emission level of the particular piece of equipment at the reference distance of 50 feet, taken from Table 12-1
 G = a constant that accounts for topography and ground effects, taken from Figure 6-5 (Chapter 6)
 D = the distance from the receiver to the piece of equipment, and
 U.F. = a usage factor that accounts for the fraction of time that the equipment is in use over the specified time period.

For general assessment, FTA identifies the following assumptions:

1. Full power operation for a time period of one hour is assumed because most construction equipment operates continuously for periods of one hour or more at some point in the construction period.

Therefore, U.F. = 1, and $10 \log(U.F.) = 0$

Hence, the Equation simplifies to: $Leq(equip) = E.L. - 20 \log(D/50) - 10G \log(D/50)$

2. Free-field conditions are assumed and ground effects are ignored. Consequently, G = 0.

Hence, the Equation further simplifies to: $Leq(equip) = E.L. - 20 \log(D/50)$

Solving for distance (D) yields: $D = 50 * 10^{(Leq - E.L.) / -20}$

Therefore, U.F. = 1, and $10 \log(U.F.) = 0$

Hence, the Equation simplifies to: $Leq(equip) = E.L. - 20 \log(D/50) - 10G \log(D/50)$

2. Free-field conditions are assumed and ground effects are ignored. Consequently, G = 0.

Hence, the Equation further simplifies to: $Leq(equip) = E.L. - 20 \log(D/50)$

Solving for distance (D) yields: $D = 50 * 10^{(Leq - E.L.) / -20}$

FTA General Noise Assessment Calculations for Construction Equipment

Underlying Equation from FTA Guidance Page 12-3

$$Leq(equip) = E.L. + 10 \log(U.F.) - 20 \log(D/50) - 10G \log(D/50)$$

where: Leq (equip) = the Leq at a receiver resulting from the operation of a single piece of equipment over a specified time period
 E.L. = the noise emission level of the particular piece of equipment at the reference distance of 50 feet, taken from Table 12-1
 G = a constant that accounts for topography and ground effects, taken from Figure 6-5 (Chapter 6)
 D = the distance from the receiver to the piece of equipment, and
 U.F. = a usage factor that accounts for the fraction of time that the equipment is in use over the specified time period.

For general assessment, FTA identifies the following assumptions:

1. Full power operation for a time period of one hour is assumed because most construction equipment operates continuously for periods of one hour or more at some point in the construction period.

Therefore, U.F. = 1, and $10 \log(U.F.) = 0$

Hence, the Equation simplifies to: $Leq(equip) = E.L. - 20 \log(D/50) - 10G \log(D/50)$

2. Free-field conditions are assumed and ground effects are ignored. Consequently, G = 0.

Hence, the Equation further simplifies to: $Leq(equip) = E.L. - 20 \log(D/50)$

Solving for distance (D) yields: $D = 50 * 10^{(Leq - E.L.) / -20}$

Formula from FTA 2006 = $Lv(D) = Lv(25 \text{ ft}) - 30 \log(D/25)$

Resultant Lv =	pile driver (impact)	66.05547
	Vibratory Roller	56.05547
	Bulldozer (large)	49.05547
	Truck (loaded)	48.05547
	Jackhammer	41.05547

G.6 Noise Model Data – Sound Level Meter Certification

Certificate of Calibration

Certificate No: 55147172456DB308

Submitted By: ESA ENERGY
2600 CAPITOL AVE STE 200
SACRAMENTO, CA 95816

Serial Number: 2456DB308 Date Received: 10/2/2015
Customer ID: Date Issued: 10/5/2015
Model: DB-308 V2 DOSIMETER Valid Until: 10/5/2016

Test Conditions: Model Conditions:
Temperature: 18°C to 29°C As Found: IN TOLERANCE
Humidity: 20% to 80% As Left: IN TOLERANCE
Barometric Pressure: 890 mbar to 1050 mbar

SubAssemblies:

Description: Serial Number:

Calibrated per Procedure: 308V-020-02

Reference Standard(s):

I.D. Number	Device	Last Calibration Date	Calibration Due
EF000138	QUEST-CAL	12/16/2014	12/16/2015
ET0000556	B&K ENSEMBLE	10/15/2014	10/15/2015

Measurement Uncertainty:

+/- 2.2% ACOUSTIC (0.19DB)
Estimated at 95% Confidence Level (k=2)

Calibrated By: Bryan Rasmussen 10/5/2015
BRYAN RASMUSSEN Service Technician

This report certifies that all calibration equipment used in the test is traceable to NIST, and applies only to the unit identified under equipment above. This report must not be reproduced except in its entirety without the written approval of 3M Detection Solutions.

Calibration Certificate

Certificate Number 2017002074

Customer:

ESA Energy
2600 Capital Avenue
Sacramento, CA 95816, United States

Model Number	LxT2	Procedure Number	D0001.8378
Serial Number	0004338	Technician	Ron Harris
Test Results	Pass	Calibration Date	24 Feb 2017
Initial Condition	AS RECEIVED same as shipped	Calibration Due	24 Feb 2018
Description	SoundTrack LxT Class 2 Class 2 Sound Level Meter Firmware Revision: 2.301	Temperature	22.84 °C ± 0.25 °C
		Humidity	51 %RH ± 2.0 %RH
		Static Pressure	86.02 kPa ± 0.13 kPa

Evaluation Method Tested electrically using Larson Davis PRMLxT2B S/N 036170 and an 18.0 pF capacitor to simulate microphone capacitance. Data reported in dB re 20 µPa assuming a microphone sensitivity of 35.5 mV/Pa.

Compliance Standards Compliant to Manufacturer Specifications and the following standards when combined with Calibration Certificate from procedure D0001.8384:

IEC 60651:2001 Type 2	ANSI S1.4-2014 Class 2
IEC 60804:2000 Type 2	ANSI S1.4 (R2006) Type 2
IEC 61252:2002	ANSI S1.11 (R2009) Class 2
IEC 61260:2001 Class 2	ANSI S1.25 (R2007)
IEC 61672:2013 Class 2	ANSI S1.43 (R2007) Type 2

Issuing lab certifies that the instrument described above meets or exceeds all specifications as stated in the referenced procedure (unless otherwise noted). It has been calibrated using measurement standards traceable to the International System of Units (SI) through the National Institute of Standards and Technology (NIST), or other national measurement institutes, and meets the requirements of ISO/IEC 17025:2005. **Test points marked with a ‡ in the uncertainties column do not fall within this laboratory's scope of accreditation.**

The quality system is registered to ISO 9001:2008.

This calibration is a direct comparison of the unit under test to the listed reference standards and did not involve any sampling plans to complete. No allowance has been made for the instability of the test device due to use, time, etc. Such allowances would be made by the customer as needed.

The uncertainties were computed in accordance with the ISO Guide to the Expression of Uncertainty in Measurement (GUM). A coverage factor of approximately 2 sigma (k=2) has been applied to the standard uncertainty to express the expanded uncertainty at approximately 95% confidence level.

This report may not be reproduced, except in full, unless permission for the publication of an approved abstract is obtained in writing from the organization issuing this report.

Correction data from Larson Davis LxT Manual for SoundTrack LxT & SoundExpert Lxt, I770.01 Rev J Supporting Firmware Version 2.301, 2015-04-30

Calibration Check Frequency: 1000 Hz; Reference Sound Pressure Level: 114 dB re 20 µPa

Notes:

¹ Construction phasing based on Project-specific assumptions.

² It was assumed that one month of staging would occur at the start of nearby construction. For example, for Conventional BART, Hacienda Staging would occur for the first month of construction activity at the Hopyard to Hacienda and Hacienda to Tassajara segments.

Construction Off-Road Emissions
BART to Livermore Extension
Livermore, California

Project and Alternatives	Construction Duration (days)	Emissions									
		Unmitigated					Mitigated				
		ROG	NO _x	Exhaust PM ₁₀	Exhaust PM _{2.5}	CO ₂ e ⁴	ROG	NO _x	Exhaust PM ₁₀	Exhaust PM _{2.5}	CO ₂ e ⁴
		lb/day					MT/Project	lb/day			
Conventional BART (Project)	1,460	5.8	60	2.9	2.7	5,337	2.5	21	1.1	1.0	5,337
DMU Alternative (EMU Option)	1,460	3.0	31	1.5	1.4	2,867	1.5	13	0.67	0.62	2,867
Express Bus/BRT Alternative	1,551	0.67	6.9	0.32	0.30	706	0.60	6.1	0.28	0.26	706
Enhanced Bus Alternative	61	2.3	24	1.2	1.1	92	2.3	24	1.2	1.1	92

Notes:

- Off-road construction emissions were calculated using CalEEMod[®] (version 2013.2.2) based on the construction equipment details presented in Table 2.
- Mitigated emissions reflect the use of Tier 4 final equipment for specific equipment types, as listed below.
 Conventional BART (Project) - compactors, dozers, dump trucks, scraping equipment, and loaders
 DMU Alternative (EMU Option) - compactors, dozers, dump trucks, and scraping equipment
 Express Bus/BRT Alternative - compactors
- Enhanced bus improvements are included for all alternatives. The bus improvements were conservatively approximated by scaling the sum of Conventional BART construction emissions, excluding Maintenance Facility/Yard activity, by the relative construction durations (i.e., BART Emissions*2 months/48 months). For each alternative, the total emissions is equal to the original scenario-specific emissions, plus the additional approximate emissions from bus improvements.
- Global warming potentials based on Intergovernmental Panel on Climate Change (IPCC) Fourth Assessment Report.

Abbreviations:

- BART - Bay Area Rapid Transit
- BRT - Bus Rapid Transit
- CalEEMod[®] - California Emissions Estimator Model
- CO₂e - carbon dioxide equivalent
- DMU - Diesel Multiple Units
- EMU - Electrical Multiple Units
- lb - pound
- MT - metric ton
- NO - nitric oxide
- NO₂ - nitrogen dioxide
- NO_x - nitrogen oxide compounds (NO + NO₂)
- PM₁₀ - particulate matter with an aerodynamic diameter less than 10 microns
- PM_{2.5} - particulate matter with an aerodynamic diameter of 2.5 microns or less
- ROG - reactive organic gas

Table 4
Construction On-Road Trips
BART to Livermore Extension
Livermore, California

Project and Alternatives	Trip Type	Roundtrips	Total VMT
Conventional BART (Project)	Worker	92,814	2,301,794
	Vendor	63,522	927,414
	Hauling	53,056	2,122,240
DMU Alternative (EMU Option)	Worker	92,814	2,301,794
	Vendor	72,718	1,061,683
	Hauling	64,027	2,561,080
Express Bus/BRT Alternative	Worker	85,223	2,113,530
	Vendor	16,463	278,342
	Hauling	14,378	575,120

Notes:

- ¹ Trip lengths were based on CalEEMod[®] (version 2013.2.2) defaults for workers, vendors, and hauling, consistent with CalEEMod[®] User's Guide Appendix D. Worker trips are 12.4 miles, vendor trips are 7.3 miles, and hauling trips are 20 miles.
- ² Vendor and hauling trip rates were based on Project-specific construction assumptions.
- ³ Worker trips were calculated assuming 100 roundtrips/day of construction (Project-specific assumption) and were adjusted to account for carpool and public transportation rates.

Abbreviations:

- BART - Bay Area Rapid Transit
 BRT - Bus Rapid Transit
 CalEEMod[®] - California Emissions Estimator Model

Enhanced Bus Alternative	61	13	40	1.3	1.2	281	Not Mitigated				
BAAQMD Significance Threshold (lb/day)		54	54	82	54	-	54	54	82	54	-

Notes:

- ¹ Total construction emissions include contributions from off-road equipment activity (Table 3), on-road traffic (Table 6), structural modifications associated with bus improvements (for Project and all alternatives), architectural coating of buildings (for the Conventional BART and DMU Alternative), and parking lot paving (for the DMU Alternative).
- ² Enhanced bus improvements are included for all alternatives. The bus improvements were conservatively approximated by scaling the sum of Conventional BART construction emissions, excluding Maintenance Facility/Yard activity, by the relative construction durations (i.e., BART Emissions*2 months/48 months). For each alternative, the total emissions is equal to the original scenario-specific emissions, plus the additional approximate emissions from bus improvements.
- ³ Emissions associated with the Enhanced Bus Alternative are not mitigated.

Abbreviations:

BART - Bay Area Rapid Transit
 BRT - Bus Rapid Transit
 CO₂e - carbon dioxide equivalent
 DMU - Diesel Multiple Units
 EMU - Electrical Multiple Units
 lb - pound
 MT - metric ton

NO - nitric oxide
 NO₂ - nitrogen dioxide
 NO_x - nitrogen oxide compounds (NO + NO₂)
 PM₁₀ - particulate matter with an aerodynamic diameter less than 10 microns
 PM_{2.5} - particulate matter with an aerodynamic diameter of 2.5 microns or less
 ROG - reactive organic gas

Paving Off-Gas Emissions	--	--	--	--
Architectural Coating Emissions	9.2	--	--	--
Total	13	40	1.3	1.2
Significance Thresholds	54	54	82	54
Above Threshold?	No	No	No	No

Notes:

- For purposes of this analysis, it is conservatively assumed that all PM₁₀ is DPM.
- Paving off-gas emissions from asphalt are calculated for the Laughlin Surface Parking Lot part of the Express Bus/BRT Alternative. It is assumed that new surface roads, I-580, and covered parking lots will not require asphalt paving.
- Construction emissions for the Enhanced Bus Alternative are very conservatively based on scaling construction emissions from Conventional BART (excluding the Maintenance Facility/Yard construction activity) based on the duration of construction. Construction of the Conventional BART Project is estimated to take 48 months while the Enhanced Bus Alternative is estimated to take 2 months. The emissions shown in this table are average daily construction emissions (i.e., emissions divided by time). Therefore the average daily construction emissions for the Enhanced Bus Alternative are similar to the emissions for the Conventional BART Project, even though total emissions will be significantly less.

Table 9

				g/trip	3.2	31	0.41	0.39	3,606

Notes:

- ¹ Emission factors for each trip type were based on EMFAC2014 emission factors for Alameda County, Calendar Years 2025 and 2040. Idling emission factors in g/idle-hour for urban buses and light-heavy duty trucks were calculated using EMFAC2014's Project-Level assessment for Alameda County.
- ² Passenger vehicle emission factors were weighted based on light duty auto, light duty trucks 1 and light duty trucks 2 emission factors and the fleet mix.
- ³ The LAVTA urban bus PM₁₀ and NO_x emission factors in g/mile were calculated based on an emissions factor of 0.01 g/bhp-hr and 1.2 g/bhp-hr, respectively (as required by the ARB Fleet Rule for Transit Agencies - Urban Bus Requirements, 13 CRR §2023.1), and a conversion factor from ARB's Carl Moyer Program Guidelines Appendix D Table D-28 for urban buses. Specific PM and NO_x reduction information was not available for non-LAVTA bus lines associated with the project, thus EMFAC2014-based emission factors are conservatively used.
- ⁴ Global warming potentials based on Intergovernmental Panel on Climate Change (IPCC) Fourth Assessment Report.

Table 14
Operational Bus Emissions
BART to Livermore Extension
Livermore, California

Operational Year	Scenario	Project and Alternatives	Net New Annual VMT ¹	Net New Annual Trips ¹	Emissions ²				
					tons/yr				
					ROG	NO _x	PM ₁₀	PM _{2.5}	CO ₂ e
2025	Project and Cumulative	Conventional BART (Project)	592,392	29,896	0.56	4.3	0.11	0.08	1,251
		DMU Alternative (EMU Option)	592,392	29,896	0.56	4.3	0.11	0.08	1,251
		Express Bus/BRT Alternative	738,089	29,628	0.69	4.2	0.04	0.04	1,528
		Enhanced Bus Alternative	660,713	28,068	0.62	3.7	0.04	0.04	1,369
2040	Project and Cumulative	Conventional BART (Project)	592,392	29,896	0.14	3.2	0.08	0.05	1,103
		DMU Alternative (EMU Option)	592,392	29,896	0.14	3.2	0.08	0.05	1,103
		Express Bus/BRT Alternative	738,089	29,628	0.17	4.0	0.03	0.03	1,347
		Enhanced Bus Alternative	660,713	28,068	0.15	3.6	0.03	0.03	1,207

Notes:

¹ Bus activity changes attributed to the Project are based on schedule information provided by Arup, as shown in the Bus Operations Memo (August 2015) and updated in February 2017. Net New Annual VMT is based on the number of net new trips between the Project (or Alternative) and No Project, provided in the Bus Operations Memo. Ramboll Environ estimated route distance using Google Earth and GIS tools. Net New Trips multiplied by the Trip Length gives the Net New Annual VMT. The Net New Annual VMT used in the Air Quality, Greenhouse Gas, and Energy sections may differ from the Net New Annual VMT used in the Transportation section due to different methods in deriving trip length. However, differences are expected to be small (less than 5%), and the VMT used for the Air Quality, Greenhouse Gas, and Energy analysis is more conservative.

² Operational on-road bus emissions calculated based on the bus total trips and vehicle miles and the emission factors in Table 12. It was assumed that each bus trip includes five minutes of idling.

Abbreviations:

BART - Bay Area Rapid Transit
 BRT - Bus Rapid Transit
 CO₂e - carbon dioxide equivalent
 DMU - Diesel Multiple Units
 EMU - Electrical Multiple Units
 MT - metric tons
 NO - nitric oxide

NO₂ - nitrogen dioxide
 NO_x - nitrogen oxide compounds (NO + NO₂)
 PM₁₀ - particulate matter with an aerodynamic diameter less than 10 microns
 PM_{2.5} - particulate matter with an aerodynamic diameter of 2.5 microns or less
 ROG - reactive organic gas
 VMT - vehicle miles traveled
 yr - year

		DMU Alternative (EMU Option)	558,771	0	0	0	0	128
		Express Bus/BRT Alternative	111,839	0	0	0	0	26
		Enhanced Bus Alternative	-	0	0	0	0	0
2040	Project and Cumulative	Conventional BART (Project)	2,942,659	0	0	0	0	674
		DMU Alternative (EMU Option)	1,165,551	0	0	0	0	267
		Express Bus/BRT Alternative	495,158	0	0	0	0	113
		Enhanced Bus Alternative	-	0	0	0	0	0

Notes:

- ¹ Annual rail car-miles and trips provided by Connetics Transportation Group based on expected BART operations.
- ² Emissions account for electricity demand for BART operations and energy demand for rail car maintenance. Electricity use was estimated using a traction electricity demand of 4.51 kWh/rail car-mile from the 2009 BART to Livermore Draft Environmental Impact Report, Section 3.15, Energy (2009). Traction electricity demand was based on historical traction electricity consumption data and rail car-miles. Maintenance energy was based on an energy demand of 7,060 BTU/rail car-mile, as published in the Caltrans Energy and Transportation Systems report, Table E-13
- ³ The electricity CO₂e emission factor is based on BART 2017 electricity portfolio projections, which is assumed to serve as a conservative assumption of electricity intensity for Project years 2025 and 2040. Global warming potentials used in these projections are based on the Intergovernmental Panel on Climate Change (IPCC) Second Assessment Report (SAR). The impact of using SAR potentials as opposed to Fourth Assessment Report potentials (which is used throughout the rest of the GHG analysis) is expected to be less than 2%.

		DMU Alternative (EMU Option)	776,400	25,265	0.77	1.5	0.077	0.077	2,404
		Express Bus/BRT Alternative	0	0	0	0	0	0	0
		Enhanced Bus Alternative	0	0	0	0	0	0	0
2040	Project and Cumulative	Conventional BART (Project)	0	0	0	0	0	0	0
		DMU Alternative (EMU Option)	864,100	27,439	0.86	1.7	0.086	0.086	2,675
		Express Bus/BRT Alternative	0	0	0	0	0	0	0
		Enhanced Bus Alternative	0	0	0	0	0	0	0

Notes:

- ¹ Annual rail car-miles and trips provided by Connetics Transportation Group based on expected DMU operations.
- ² Emissions account for energy use for DMU operations and energy demand for rail car maintenance. Energy use rates for running (in kWh/mile) were based on the 2008 LTK Report, "DMU and LRV Comparison," where DMU rates were modeled after eBART DMU operations. DMU energy use rates are estimated to be 4.5 kWh/rail car-mile and account for Project-specific assumptions for average rail cars per train and miles per roundtrip. Maintenance energy was based on an energy demand of 7,060 BTU/rail car-mile, as published in the Caltrans Energy and Transportation Systems report, Table E-13 (1983). Global warming potentials for direct (non-electricity) emissions are based on Intergovernmental Panel on Climate Change (IPCC) Fourth Assessment Report.
- ³ It is assumed that the unit uses electricity while idling at stations. The electricity CO₂e emission factor is based on BART 2017 electricity portfolio projections, which is assumed to serve as a conservative assumption of electricity intensity for Project years 2025 and 2040. Global warming potentials used in these projections are based on the Intergovernmental Panel on Climate Change (IPCC) Second Assessment Report (SAR). The impact of using SAR potentials as opposed to Fourth Assessment Report potentials (which is used throughout the rest of the GHG analysis) is expected to be less than 2%.

		Enhanced Bus Alternative	0	0	0	0	0

Notes:

- ¹ Diesel engine emission factors for NMHC, NO_x, PM₁₀, and PM_{2.5} based on ARB Off-Road Compression-Ignition (Diesel) Engine Tier 2 Standards. Emission factors for ROG and TOG were converted from NMHC using USEPA hydrocarbon conversion factors (USEPA 2010). Emission factor for CO₂ from AP-42, Section 3.4 (USEPA 1996). PM₁₀ and PM_{2.5} emission factors for the Isabel Station engine assume 85% control with the use of a diesel particulate filter (DPF).
- ² Emissions assume one 2500-kW (3351-HP) emergency generator operated 24 hours/year for non-emergency maintenance and testing. Note that this analysis conservatively assumes operation at 100% capacity (load factor = 1) during emissions tests.
- ³ Emissions assume one 500-kW (670-HP) emergency generator operated 50 hours/year for non-emergency maintenance and testing. Note that this analysis conservatively assumes operation at 100% capacity (load factor = 1) during emissions tests.

Abbreviations:

ARB - [California] Air Resources Board	kW - kilowatt
BART - Bay Area Rapid Transit	MT - metric tons
bhp - brake horsepower	NMHC - non-methane hydrocarbons
BRT - Bus Rapid Transit	NO - nitric oxide
CO ₂ - carbon dioxide	NO ₂ - nitrogen dioxide
CO ₂ e - carbon dioxide equivalent	NO _x - nitrogen oxide compounds (NO + NO ₂)
DMU - Diesel Multiple Units	PM ₁₀ - particulate matter with an aerodynamic diameter less than 10 microns
DPF - Diesel Particulate Filter	PM _{2.5} - particulate matter with an aerodynamic diameter of 2.5 microns or less
EMU - Electrical Multiple Units	ROG - reactive organic gas
g - gram	TOG - total organic gas
hr - hour	USEPA - United States Environmental Protection Agency
HP - horsepower	yr - year

Table 21
Operational Solvent Emissions
BART to Livermore Extension
Livermore, California

Operational Year	Scenario	Project and Alternatives	Solvent Usage ¹ (gal/year)	Emissions ²				
				tons/yr				MT/yr
				ROG	NO _x	PM ₁₀	PM _{2.5}	CO _{2e}
2025 and 2040	Project and Cumulative	Conventional BART (Project)	20	0.08	0	0	0	0
		DMU Alternative (EMU Option)	20	0.08	0	0	0	0
		Express Bus/BRT Alternative	0	0	0	0	0	0
		Enhanced Bus Alternative	0	0	0	0	0	0

Notes:

¹ Solvent usage in the form of brake cleaners and wipe cleaner solvents are estimated to be less than 20 gallons per year, with total emissions not to exceed 150 pounds/year, in accordance with the BAAQMD permitting exemption in Regulation 2-1-118-9.1

² VOC content in solvents and surface cleaners will comply with the BAAQMD VOC limit in Regulation 8-4-302.3.

Abbreviations:

BAAQMD - Bay Area Air Quality Management District
 BRT - Bus Rapid Transit
 BART - Bay Area Rapid Transit
 CO_{2e} - carbon dioxide equivalent
 DMU - Diesel Multiple Units
 EMU - Electrical Multiple Units
 gal - gallons
 MT - metric tons

NO - nitric oxide
 NO₂ - nitrogen dioxide
 NO_x - nitrogen oxide compounds (NO + NO₂)
 PM₁₀ - particulate matter with an aerodynamic diameter less than 10 microns
 PM_{2.5} - particulate matter with an aerodynamic diameter of 2.5 microns or less
 ROG - reactive organic gas
 VOC - volatile organic compounds
 yr - year

Table 22
Operational Area Coating Emissions
BART to Livermore Extension
Livermore, California

Operational Year	Scenario	Alternative	Total Floor Area	Total Building Surface Area ¹	Application Rate ²	Paint VOC EF ³		Emissions ⁴				
			square feet	square feet		Indoor	Outdoor	lbs/yr				MT/yr
						g/L	g/L	ROG	NO _x	PM ₁₀	PM _{2.5}	CO ₂ e
2025 and 2040	Project and Cumulative	Conventional BART (Project)	1,379,033	2,758,066	10%	100	150	1,438	-	-	-	-
		DMU Alternative (EMU Option)	1,172,599	2,345,199	10%	100	150	1,223	-	-	-	-
		Express Bus/BRT Alternative	291,967	329,308	10%	100	150	172	-	-	-	-
		Enhanced Bus Alternative	-	-	-	-	-	-	-	-	-	-

Notes:

- ¹ Consistent with CalEEMod[®] (version 2013.2.2), non-residential building surface area is assumed to be 2 times the floor area. Also consistent with CalEEMod[®], the parking painted area is assumed to be 6% of the total surface area.
- ² Consistent with CalEEMod[®], 10% of all surfaces are assumed to be coated each year.
- ³ Based on BAAQMD paint VOC regulations, 100 g/L for flat paints, generally used indoors, and 150 g/L for all other architectural coatings. Building area is assumed to be 75% indoors and 25% outdoors, consistent with CalEEMod[®].
- ⁴ Uses CalEEMod[®] assumption that 1 gallon of paint covers 180 square feet.

Table 23
Operational Water and Wastewater Emissions
BART to Livermore Extension
Livermore, California

Operational Year	Scenario	Project and Alternatives	Water Consumption ¹ gallon/yr	Emission Source	2025 and 2040 Emissions ^{2,3} MT CO ₂ e/yr	
					2025 and 2040	
2025 and 2040	Project and Cumulative	Conventional BART (Project)	5,488,117	Indirect Emissions from Water and Wastewater		
				Supply Water		1.54
				Treat Water		0.08
				Distribute Water		0.93
				Treat Wastewater		1.39
				Direct Emissions from Wastewater Treatment		
				Septic Tank		2.37
				Aerobic Processes		2.08
				Facultative Lagoons		0.83
2025 and 2040	Project and Cumulative	DMU Alternative (EMU Option)	3,636,758	Indirect Emissions from Water and Wastewater		
				Supply Water		1.02
				Treat Water		0.05
				Distribute Water		0.61
				Treat Wastewater		0.92
				Direct Emissions from Wastewater Treatment		
				Septic Tank		1.86
				Aerobic Processes		1.63
				Facultative Lagoons		0.65
2025 and 2040	Project and Cumulative	Express Bus/BRT Alternative	1,326,426	Indirect Emissions from Water and Wastewater		
				Supply Water		0.37
				Treat Water		0.02
				Distribute Water		0.22
				Treat Wastewater		0.34
				Direct Emissions from Wastewater Treatment		
				Septic Tank		0.74
				Aerobic Processes		0.65
				Facultative Lagoons		0.26
2025 and 2040	Project and Cumulative	Enhanced Bus Alternative	688,715	Indirect Emissions from Water and Wastewater		
				Supply Water		0.19
				Treat Water		0.01
				Distribute Water		0.12
				Treat Wastewater		0.17
				Direct Emissions from Wastewater Treatment		
				Septic Tank		0.42
				Aerobic Processes		0.37
				Facultative Lagoons		0.15

Notes:

- ¹ Water consumption includes use at the Dublin/Pleasanton and Isabel stations, the Maintenance Facility, and wayside facilities. Estimates of consumption are primarily based on historical usage at existing and comparable BART facilities, scaled for anticipated level of activity. Energy use consists of upstream electricity to supply, treat, and distribute water and downstream electricity to treat wastewater.
- ² Water electricity intensity factors and wastewater treatment emission factors consistent with CalEEMod[®] (version 2013.2.2), for Alameda County.
- ³ The electricity CO₂e emission factor is based on PG&E CO₂ projections for 2020 and CalEEMod[®] (version 2013.2.2) defaults for CH₄ and N₂O. This is a conservative estimate, as electricity GHG emissions are expected to decrease by 2025 and 2040. Global warming potentials are based on Intergovernmental Panel on Climate Change (IPCC) Fourth Assessment Report.

Abbreviations:

ARB - [California] Air Resources Board	DMU - Diesel Multiple Units
BART - Bay Area Rapid Transit	EMU - Electrical Multiple Units
CalEEMod [®] - California Emissions Estimator Model	GHG - greenhouse gas
CH ₄ - methane	MT - metric tons
CO ₂ - carbon dioxide	N ₂ O - nitrous oxide
CO ₂ e - carbon dioxide equivalent	yr - year

Table 24
Operational Solid Waste Emissions
BART to Livermore Extension
Livermore, California

Operational Year	Scenario	Project and Alternatives	Waste Disposal ¹ ton/yr	2025 and 2040 Emissions ^{2,3} MT CO ₂ e/yr
2025 and 2040	Project and Cumulative	Conventional BART (Project)	888	447
2025 and 2040	Project and Cumulative	DMU Alternative (EMU Option)	458	231
2025 and 2040	Project and Cumulative	Express Bus/BRT Alternative	206	103
2025 and 2040	Project and Cumulative	Enhanced Bus Alternative	103	52

Notes:

¹ Waste estimates include disposal at the Dublin/Pleasanton and Isabel stations, the Maintenance Facility, and wayside facilities. Estimates of disposal are primarily based on historical generation at existing and comparable BART facilities, scaled for anticipated level of activity.

² Solid waste landfill gas emissions calculation consistent with CalEEMod[®] (version 2013.2.2), for Alameda County.

³ Global warming potentials based on Intergovernmental Panel on Climate Change (IPCC) Fourth Assessment Report.

Abbreviations:

ARB - [California] Air Resources Board	EMU - Electrical Multiple Units
BART - Bay Area Rapid Transit	GHG - greenhouse gas
CalEEMod [®] - California Emissions Estimator Model	IPCC - Intergovernmental Panel on Climate Change
CH ₄ - methane	MT - metric tons
CO ₂ - carbon dioxide	N ₂ O - nitrous oxide
CO ₂ e - carbon dioxide equivalent	yr - year
DMU - Diesel Multiple Units

Table 25
Operational Forklift Emissions
BART to Livermore Extension
Livermore, California

Alternative	Parameters	Unit	Value
Conventional BART (Project) and DMU Alternative (EMU Option)	Hours of Operation per Day	hr/day	8
	Operation Day per Year	days/year	365
	# of Forklift Needed	# of forklift	2
	Forklift Horsepower ¹	HP	75
	Forklift Load Factor ²	-	0.20
	Unit Conversion	kW/hp	0.75
	Energy Efficiency ³	-	0.64
	2025/2040 CO ₂ e Intensity Factor ⁴	lb/MWh	97.3
	2025/2040 Total Forklift Emissions	MT CO₂e/yr	4.5

Notes:

¹ Industrial average based on review of electric forklift product specifications.

² Default values from ARB's In-Use Offroad Equipment Inventory Model (OFFROAD2011).

³ The equipment energy efficiency is estimated by multiplying the average Charge Return Factor and Power Factor present in PG&E's efficient forklift battery charger fact sheet.

Charge Return Factor: the ratio of energy supplied to the battery to energy delivered by the battery.

Power Factor: the ratio of real power performing work to apparent power in an electrical system.

⁴ The electricity CO₂e emission factor is based on BART 2017 electricity portfolio projections, which is assumed to serve as a conservative assumption of electricity intensity for Project years 2025 and 2040. Global warming potentials used in these projections are based on the Intergovernmental Panel on Climate Change (IPCC) Second Assessment Report (SAR). The impact of using SAR potentials as opposed to Fourth Assessment Report potentials (which is used throughout the rest of the GHG analysis) is expected to be less than 2%.

Abbreviations:

ARB - [California] Air Resources Board

BART - Bay Area Rapid Transit

CO₂e - carbon dioxide equivalent

DMU - Diesel Multiple Units

EMU - Electrical Multiple Units

GHG - greenhouse gas

hp - horsepower

hr - hour

kW - kilowatt

lb - pound

MT - metric tons

MWh - megawatt-hour

PG&E - Pacific Gas and Electric Company

yr - year

Table 26
Operational Solar PV Greenhouse Gas Emission Reductions
BART to Livermore Extension
Livermore, California

Project and Alternatives	Parameters	Unit	Value
Conventional BART (Project) and DMU Alternative (EMU Option)	DC System Size ¹	kW	1000
	Annual Average Solar Radiation ¹	kWh/m ² /day	5.59
	Annual Electricity Generation ¹	kWh/year	1,557,588
	2025/2040 CO ₂ e Intensity Factor ²	lb/MWh	97.3
	2025 Solar PV Emissions	MT CO₂e/yr	-69
	2040 Solar PV Emissions		-59

Notes:

- ¹ System size, average solar radiation, and annual system generation were determined using default commercial rooftop solar array assumptions in the National Renewable Energy Laboratory's PVWatts tool. Available online at: <http://pvwatts.nrel.gov/pvwatts.php>
- ² The electricity CO₂e emission factor is based on BART 2017 electricity portfolio projections, which is assumed to serve as a conservative assumption of electricity intensity for Project years 2025 and 2040. Global warming potentials used in these projections are based on the Intergovernmental Panel on Climate Change (IPCC) Second Assessment Report (SAR). The impact of using SAR potentials as opposed to Fourth Assessment Report potentials (which is used throughout the rest of the GHG analysis) is expected to be less than 2%.

Abbreviations:

BART - Bay Area Rapid Transit	kWh - kilowatt-hour
CO ₂ e - carbon dioxide equivalent	lb - pound
DC - direct current	m ² - square meters
DMU - Diesel Multiple Units	MT - metric tons
EMU - Electrical Multiple Units	MWh - megawatt-hour
hp - horsepower	PV - photovoltaic
hr - hour	yr - year
kW - kilowatt

Table 31
Modeling Parameters for Construction, Transit Sources, and Emergency Generators
BART to Livermore Extension
Livermore, California

Source	Source Type	Source Dimension (m)	Number of Sources	Release Height ¹ (m)	Initial Horizontal Dimension ² (m)	Initial Vertical Dimension ³ (m)	Width ⁴ (m)
Construction Equipment	Volume	20	Variable	5	9.3	1.40	---
DMU	Line	Variable Length	Variable	3.6	---	3.34	9.0
Bus Routes	Line	Variable Length	Variable	3.4	---	1.79	8.6
Bus Stations (Idling)	Volume	21.5	Multiple	3.4	5	0.79	---
Maintenance Yard	Volume	20	Multiple	5	9.3	1.40	---

Source	Source Type	Source Dimension	Number of Sources	Release Height (m)	Exhaust Temperature (K)	Exit Velocity (m/s)	Stack Diameter (m)
Emergency Generator (Isabel Station) ⁵	Point	---	1	4.1	763.85	45.3	0.2
Emergency Generator (Maintenance Facility) ⁶	Point	---	1	3.66	739.82	45.3	0.18

Notes:

- ¹ The SCAQMD Localized Significance Threshold Methodology (SCAQMD 2008) was used for setting up construction volume sources. Release height for bus emission source was based on the exhaust release height from a proposed bus type.
- ² For adjacent volume sources the initial horizontal dimension was calculated as the center-to-center distance divided by 2.15; for single volume sources, center-to-center distance divided by 4.3 (USEPA 2004).
- ³ The initial vertical dimension for the construction area source is explicitly given in the SCAQMD LST methodology. For bus routes the initial vertical dimension was calculated based on the Haul Road Work Group Final Report (USEPA 2012). For idling buses, the initial vertical dimension is calculated as the release height divided by 4.3.
- ⁴ The width of the line source is consistent with the Haul Road Work Group Final Report (USEPA 2012). The vehicle width is assumed to be 2.6 meters with an additional 6 meters added (3 meters to both sides) to account for the mechanical turbulence from moving vehicles.
- ⁵ Stack parameters for the Isabel Station emergency generator were provided by the client. These correspond to a 2.5-MW Caterpillar generator set. All parameters provided were used in the modeling except exit velocity, where a more conservative default value was used (STI 2011).
- ⁶ Stack parameters for the maintenance yard emergency generator were default parameters obtained from The San Francisco Community Risk Reduction Plan: Technical Support Documentation. [Bay Area Air Quality Management District (BAAQMD), San Francisco Department of Public Health, San Francisco Planning Department. 2012]

Abbreviations:

BART - Bay Area Rapid Transit	s - seconds
HRA - Health Risk Assessment	SCAQMD - South Coast Air Quality Management District
K - degrees Kelvin	STI - Sonoma Technology, Inc.
LST - Localized Significance Thresholds	USEPA - United States Environmental Protection Agency
m - meter

Table 32
Modeling Adjustment Factor
BART to Livermore Extension
Livermore, California

Receptor Type	Scenario	MAF
Daycare	Construction ¹	2.4
	Operation ²	1
Hospital	Construction ³	1
	Operation ²	1
Recreational	Construction ¹	2.4
	Operation ²	1
Residential	Construction ³	1
	Operation ²	1
School	Construction ¹	2.4
	Operation ²	1

Notes:

- ¹ Construction is assumed to occur 14 hours/day and 5 days/week when the daycare children, recreational users and school children are exposed. The models annualized construction emissions over 24 hour/day and 7 days/ week. In accordance with OEHHA's recommendation (Cal/EPA 2015), a modeling adjustment factor (MAF) of 2.4 ([24 hours/14 hours] x [7days/5 days]) was applied to the annual average concentrations used in the evaluation for the daycare children, recreational users and school children to account for an construction emission schedule of 14 hours/day, 5 days/week.
- ² Operational emissions were assumed to be continuous (i.e., 24 hours/day, 7 days/ week), therefore no adjustment was needed in the calculation of exposure point concentrations for the operational scenarios.
- ³ The models annualized construction emissions over 24 hour/day and 7 days/week. The residents were assumed to be exposed to the construction emissions continuously, therefore no adjustment is needed in the calculation of exposure point concentrations for the residents.

	2040	Age 2-<16 Years	520	9	--	180	25550	0.033

Notes:

¹ The exposure frequency for daycare children reflects default exposure frequency for workers from OEHHA (2015) assuming that daycare children are at daycare centers while the parents are at work. The total exposure duration for daycare children reflects default duration suggested by BAAQMD (2016) and OEHHA (2015). Daycare children are assumed to be at daycare centers 10 hours/day, with 2 hours conducting moderate intensity activities outdoor and 8 hours conducting light intensity activities indoor. Daily breathing rates for daycare children reflect time-weighted average of 95th percentile moderate intensity breathing rates and light intensity breathing rates from OEHHA (2015).

² The child patients are conservatively assumed to be at an in-patient medical facility for 350 days per year for one year. The daily breathing rate is conservatively assumed to be the same as the default daily breathing rates for a 0-2 year old child residents from OEHHA (2015) and BAAQMD (2016).

Table 33
Exposure Parameters - Operational Scenario
BART to Livermore Extension
Livermore, California

- ³ The recreational users are conservatively assumed to be exposed at a recreational facility near the Site 2 hours/event, 2 events/week every week. Daily breathing rates for the recreational users reflect the 95th percentile moderate intensity breathing rates from OEHHA's Hot Spots guidelines (2015).
- ⁴ The total exposure duration, and exposure frequency for residents reflect default exposure assumptions for residents from OEHHA (2015) and BAAQMD (2016). The daily breathing rates for residents reflect recommended daily breathing rates for residents from BAAQMD (2016) as follows: 95th percentile 24-hour daily breathing rate for 3rd trimester and age 0-<2 years; 80th percentile for age 2-<9, 2-<16, and 16-30 years. Fraction of time spent at home is conservatively assumed to be 1 (i.e. 24 hours/day) for age groups from the third trimester to less than 16 years old. Based on the OEHHA 2015 Guidance, the age group 16 to 30 years old is estimated to be at school or work for 6.5 hours of the day. Therefore, the fraction of time spent at home is assumed to be 0.73 (17.5 hours/24 hours per day) for this age group.
- ⁵ The exposure frequency and total exposure duration for the school children reflect default exposure frequency and duration for school children from OEHHA (2015) and BAAQMD (2016). Daily breathing rates for school children reflect the 95th percentile moderate intensity breathing rates from OEHHA (2015).
- ⁶ Two operational scenarios were evaluated for the operation beginning year in 2015 and for the full build-out in 2040.

Intake Calculation:

$$IF_{inh} = DBR * FAH * EF * ED * CF / AT$$

$$CF = 0.001 \text{ (m}^3\text{/L)}$$

Abbreviations:

AT - averaging time	IF _{inh} - intake factor
BAAQMD - Bay Area Air Quality Management District	kg - kilogram
DBR - daily breathing rate	L - liter
ED - exposure duration	m ³ - cubic meter
EF - exposure frequency	OEHHA - Office of Environmental Health Hazard Assessment
FAH - fraction of time at home	

References:

		Age 2-<9 Years	631	0.75	1.0	350	25550	0.0065
School Child ⁵	Year 1 Quarter 1	Age 2-<9 Years	640	4.0	--	180	25550	0.018
	Year 2 Quarter 1	Age 2-<9 Years	640	3.0	--	180	25550	0.014

Notes:

- ¹ The exposure frequency for daycare children reflects default exposure frequency for workers from OEHHA (2015) assuming that daycare children are at daycare centers while the parents are at work. Daycare children are assumed to be at daycare centers 10 hours/day, with 2 hours conducting moderate intensity activities outdoor and 8 hours conducting light intensity activities indoor. Daily breathing rates for daycare children reflect time-weighted average of 95th percentile moderate intensity breathing rates and light intensity breathing rates from OEHHA (2015).
- ² The child patients are conservatively assumed to be at an in-patient medical facility for 350 days per year for one year. The daily breathing rate is conservatively assumed to be the same as the default daily breathing rates for a 0-2 year old child residents from OEHHA (2015) and BAAQMD (2016).

Table 34
Exposure Parameters - Construction Scenario
BART to Livermore Extension
Livermore, California

- ³ The recreational users are conservatively assumed to be exposed at a recreational facility near the Site 2 hours/event, 2 events/week every week. Daily breathing rates for the recreational users reflect the 95th percentile moderate intensity breathing rates from OEHHA's Hot Spots guidelines (2015).
- ⁴ The total exposure duration, and exposure frequency for residents reflect default exposure assumptions for residents from OEHHA (2015) and BAAQMD (2016). The daily breathing rates for residents reflect recommended daily breathing rates for residents from BAAQMD (2016) as follows: 95th percentile 24-hour daily breathing rate for 3rd trimester and age 0-<2 years; 80th percentile for age 2-<9. Fraction of time spent at home is conservatively assumed to be 1 (i.e., 24 hours/day) for age groups from the third trimester to less than 9 years old.
- ⁵ The exposure frequency and total exposure duration for the school children reflect default exposure frequency and duration for school children from OEHHA (2015) and BAAQMD (2016). Daily breathing rates for school children reflect the 95th percentile moderate intensity breathing rates from OEHHA (2015).
- ⁶ Two construction scenarios were evaluated based on the two exposure starting dates that are anticipated to have the highest risks (i.e. Year 1 Quarter 1, and Year 2 Quarter 1). The exposure durations for daycare children, child patients, recreational users, and school children during construction reflect the proposed construction schedules under these two exposure starting dates. Exposure duration for hospital patients is a conservative estimate of one total year during construction.

Intake Calculation:

$$IF_{inh} = DBR * FAH * EF * ED * CF / AT$$

$$CF = 0.001 (m^3/L)$$

Abbreviations:

AT - averaging time

BAAQMD - Bay Area Air Quality Management District

DBR - daily breathing rate

ED - exposure duration

EF - exposure frequency

FAH - fraction of time at home

IF_{inh} - intake factor

kg - kilogram

L - liter

m³ - cubic meter

Notes:

- ¹ All sources within 1,000 feet of the MEISR were included as per the BAAQMD Stationary Source Screening Analysis Tool. Source information was obtained from the Alameda County Stationary Source Screening tool with additional details provided by BAAQMD.
- ² The distance presented here is from the source to the MEISR.
- ³ BAAQMD screening tools' calculated impacts are based on previous OEHHA guidance (2003). Per BAAQMD recommendations, cancer risks were conservatively scaled by a factor of 1.37 to account for the updated exposure parameters and calculation methodologies in OEHHA 2015 guidance.
- ⁴ The adjusted health impacts listed in the table above were calculated using the health impacts estimated using BAAQMD Stationary Source Screening Analysis Tool and were adjusted using the BAAQMD Diesel Risk Multiplier since all sources were diesel generators.
- ⁵ There are no permitted stationary sources within 1,000 feet of the MEISR.

Abbreviations:

- BAAQMD - Bay Area Air Quality Management District
- BART - Bay Area Rapid Transit
- BRT - Bus Rapid Transit
- DMU - Diesel Multiple Units
- EMU - Electrical Multiple Units
- ft - feet

Notes:

- ¹ For the Project analysis, only Alternatives that have road segments with an increase in average daily traffic volume > 10,000 vehicles per day are shown. For the cumulative analysis, all roadway segments with average daily traffic volume > 10,000 vehicles per day are included.
- ² Unique road segment identifier based on the UTM Coordinates of the midpoint of the road segment (UTM Zone 10, NAD83).
- ³ For a screening assessment, the table provides health impacts to the maximally exposed individual sensitive receptor (MEISR). Distances presented represent the distance from the nearest edge of the roadway to the MEISR.
- ⁴ Peak hourly traffic volumes were provided by ARUP for 2025 and 2050 for the Proposed Project, each Alternative, and the No Project Alternative. Peak hourly traffic volumes were then scaled to average daily traffic volume. For the Project analysis, the difference in average daily traffic volume was then calculated between the Proposed Project and the No Project Alternative and each Alternative and the No Project Alternative. The above screening analysis for the Project includes individual road segments with an increase in average daily traffic volume > 10,000 vehicles per day.
- ⁵ For road segments that are neither North-South nor East-West, road direction was set to the orientation that results in higher concentrations/risks.
- ⁶ BAAQMD screening tools' calculated impacts are based on previous OEHHA guidance. Per BAAQMD recommendations, cancer risks were conservatively scaled by a factor of 1.37 to account for the updated exposure parameters and calculation methodologies in OEHHA 2015 guidance.
- ⁷ Screening estimates of health impacts were estimated with the BAAQMD Roadway Screening Analysis Calculator (BAAQMD 2015). The screening tool does not allow calculation of impacts from roadways that are over 1,000 ft from the MEIR. Roadways outside of the 1,000 ft "zone of influence" were not considered in the analysis.
- ⁸ Screening estimates of health impacts for I-580 were estimated with the BAAQMD Highway Screening Analysis Calculator (BAAQMD 2011).
- ⁹ Values are applicable for the DMU Alternative cancer risk and EMU Option cancer risk and PM_{2.5} concentration. The DMU PM_{2.5} MEISR is at a separate location.

Abbreviations:

ADT - Average Daily Traffic	INP - Isabel Neighborhood Plan
BAAQMD: Bay Area Air Quality Management District	MEISR - Maximally Exposed Individual Sensitive Receptor
BART - Bay Area Rapid Transit	µg/m ³ - microgram per cubic meter
BRT - Bus Rapid Transit	NAD83 - North American Datum 1983
DMU - Diesel Multiple Units	OEHHA - Office of Environmental Health Hazard Assessment
EMU - Electrical Multiple Units	PM _{2.5} - particulate matter with an aerodynamic diameter of 2.5 microns or less
ft - feet	UTM - Universal Transverse Mercator

Table 39
Odor Analysis - Construction
BART to Livermore Extension
Livermore, California

Project and Alternatives ⁴	Source Group	Emissions ¹		Maximum Concentration ²		Maximum Ratio of Concentration to Odor Threshold ³
		DPM/PM ₁₀	ROG	DPM/PM ₁₀	ROG	
		lbs/day	lbs/day	µg/m ³	µg/m ³	
Conventional BART (Project)	Off-road	2.9	5.8	0.11	0.22	0.00018
	Trucks	0.15	1.3		0.97	0.0017
DMU Alternative	Off-road	1.5	3.0	0.12	0.24	0.00019
	Trucks	0.17	1.4		0.98	0.0017
Express Bus/BRT Alternative	Off-road	0.32	0.67	0.039	0.081	0.00007
	Trucks	0.044	0.65		0.57	0.0010
Overall Maximum						0.0017

Notes:

- ¹ Average Daily Construction-Related Emissions. Concentration of odor causing chemicals for each Project Alternative is conservatively estimated using the highest ROG-to-DPM ratios. Emissions by source group are obtained from Table 8.
- ² DPM/PM₁₀ concentration represents the maximum total concentration modeled at all receptors. ROG concentration represents the maximum concentration estimated by scaling the maximum DPM concentration by ROG-to-DPM emission ratio:

$$\text{MaxConc}_{\text{ROG}} = \text{MaxConc}_{\text{DPM}} \times (\text{Emis}_{\text{ROG}} / \text{Emis}_{\text{DPM}})$$
- ³ Maximum ratio of concentration to odor threshold is determined using following methodology:
 - a) Maximum total predicted ROG concentrations were speciated using USEPA SPECIATE Database (USEPA, 2014). ROG concentrations estimated using ROG/DPM emission ratios for off-road equipment were speciated using concentration profile for offroad sources (USEPA, 2014; Profile #3161); ROG concentration derived using ROG/DPM emission ratio for trucks were speciated using concentration profile for offroad sources (USEPA, 2014; Profile 4674).
 - b) Ratios of maximum concentration over respective odor threshold concentration were calculated for all speciated ROG for which odor thresholds were available (Amoore 1983).
 - c) Value shown in table represents the maximum ratio of concentration to odor threshold of all ROG components with odor thresholds taken from the compilation of odor thresholds in Amoore (1983).
- ⁴ Construction associated with the Enhanced Bus Alternative are limited to bus improvements such as excavation, paving, and construction of bus bulbs, bus shelters, and signage and are considered to be de minimis. Therefore, an analysis of the Enhanced Bus Alternative is not included here.

Abbreviations:

BART - Bay Area Rapid Transit	PM ₁₀ - particulate matter with an aerodynamic diameter less than 10 microns
BRT - Bus Rapid Transit	DPM - diesel particulate matter
DMU - Diesel Multiple Units	ROG - reactive organic gas
lb - pound	µg - microgram
	m ³ - cubic meter

Table 40
Odor Analysis - Operational Scenario
BART to Livermore Extension
Livermore, California

Operational Year	Project and Alternatives	Source Group	Emissions ¹		Maximum Concentration ²		Maximum Ratio of Concentration to Odor Threshold ³
			DPM/PM ₁₀	ROG	DPM/PM ₁₀	ROG	
			lbs/day	lbs/day	µg/m ³	µg/m ³	
2025	Conventional BART (Project)	Buses	0.59	3.1	0.036	0.19	0.00034
	DMU Alternative	Buses	0.59	3.1	0.048	0.25	0.00044
		DMU	0.42	4.2		0.48	0.00039
	EMU Option	Buses	0.59	3.1	0.037	0.19	0.00034
	Express Bus/BRT Alternative	Buses	0.22	3.8	0.027	0.48	0.00084
	Enhanced Bus Alternative	Buses	0.20	3.4	0.042	0.72	0.00128
Overall Maximum							0.00128

Notes:

¹ Average net new daily operational emissions for a given source group. Concentration of odor causing chemicals for each Project Alternative is conservatively estimated using the highest ROG-to-DPM ratios (only applies for DMU Alternative). Emissions by source group are obtained from Table 27. Emissions of maintenance trucks, shuttle van, and standby emergency generators are significantly lower compared to that of buses and DMU and are not included.

² DPM/PM₁₀ concentration represents the maximum total concentration modeled at all receptors. ROG concentration represents the maximum concentration estimated by scaling the maximum DPM concentration by ROG-to-DPM emission ratio:

$$\text{MaxConc}_{\text{ROG}} = \text{MaxConc}_{\text{DPM}} \times \text{Emiss}_{\text{ROG}} / \text{Emiss}_{\text{DPM}}$$

³ Maximum ratio of concentration to odor threshold is determined using following methodology:

a) Maximum total predicted ROG concentrations were speciated using USEPA SPECIATE Databased (USEPA 2014). ROG concentrations estimated using ROG/DPM emission ratios for buses were speciated using concentration profiles for onroad sources (USEPA 2014; Profiles 4674 and 4741); ROG concentration derived using ROG/DPM emission ratio for DMU was speciated using concentration profile for offroad sources (USEPA 2014; Profiles 3161).

b) Ratios of maximum concentration over respective odor threshold concentration were calculated for all speciated ROG for which odor thresholds were available (Amoore 1983)

c) Value shown in table represents the maximum ratio of concentration to odor threshold of all ROG components with odor thresholds taken from the compilation of odor thresholds in Amoore (1983). For buses it also represents the maximum ratio determined using two onroad SPECIATE profiles (USEPAa, USEPAb).

Abbreviations:

BART - Bay Area Rapid Transit
 BRT - Bus Rapid Transit
 DMU - Diesel Multiple Units
 EMU - Electrical Multiple Units
 lb - pound

PM₁₀ - particulate matter with an aerodynamic diameter less than 10 microns
 DPM - diesel particulate matter
 ROG - reactive organic gas
 µg - microgram
 m³ - cubic meter

APPENDIX I: ENERGY AND GREENHOUSE GAS TECHNICAL TABLES

- I.1 Energy Detail Tables**
- I.2 Energy and Greenhouse Gas Calculations**

I.1 Energy and Greenhouse Gas Technical Tables – Energy Detail Tables

APPENDIX I.1 ENERGY DETAIL TABLES

Tables 1 through 20 below provide detailed estimates for change in energy use from the operation of the Proposed Project and Build Alternatives in 2025 and 2040 under Project Conditions, followed by 2025 and 2040 under Cumulative Conditions. Information is provided in kilowatt-hours (kWh) of electricity, gallons of diesel, gallons of gasoline, and total energy in million British thermal units (MMBTU).

TABLE 1 2025 CONVENTIONAL BART PROJECT – CHANGE IN ANNUAL ENERGY USE DETAILS

Energy Use Component	Electricity (kWh)	Diesel (Gallons)	Gasoline (Gallons)	Total Energy Use (MMBTU)
Sources				
<i>Transit Operations</i>				
BART operations	13,060,256	-	-	44,588
Bus operations	-	120,505	-	16,689

I.2 Energy and Greenhouse Gas Technical Tables – Energy and Greenhouse Gas Calculations

APPENDIX I.2 ENERGY AND GREENHOUSE GAS CALCULATIONS

**Table E-1a
Energy Use from Project Construction
BART to Livermore Extension Project
Livermore, California**

Source		Energy Use			
		BART	DMU/EMU	Express Bus/BRT	Enhanced Bus
Diesel (gal)	On-Road Vehicles	482,395	572,498	145,425	15,652
	Off-Road Equipment	568,454	304,547	75,726	9,811
Gasoline (gal)	On-Road Vehicles	107,641	109,991	102,552	3,979
Electricity (kWh)	On-Road Vehicles	10,293	10,293	10,913	383

Notes

On-road mobile source fuel use based on vehicle miles traveled (VMT) for all years of construction and fleet-average fuel consumption in gallons per mile from EMFAC2014 for 2020 in Alameda County. Electricity demand based on VMT and calculated average electric vehicle fuel economy for 2015 models (in kWh per mile) from the DOE Fuel Economy Guide.

Off-road mobile source fuel usage based on a fuel usage rate of 0.05 gallons of diesel per horsepower (hp)-hour, consistent with diesel conversion factors given in USEPA AP-42 Table 3.4.1.

Abbreviations

BART: Bay Area Rapid Transit	gal: gallon
BRT: Bus Rapid Transit	hp: horsepower
DMU: Diesel Multiple Unit	kWh: kilowatt-hour
DOE: United States Department of Energy	USEPA: United States Environmental Protection Agency
EMFAC2014: California Air Resources Board Emission Factor mod VMT: vehicle miles traveled	
EMU: Electric Multiple Unit

Table E-1b
Energy Use from Project Construction (MMBtu)
BART to Livermore Extension Project
Livermore, California

Source		Energy Use (MMBtu)			
		BART	DMU/EMU	Express Bus/BRT	Enhanced Bus
Diesel	On-Road Vehicles	66,807	79,285	20,140	2,168
	Off-Road Equipment	78,725	42,177	10,487	1,359
Gasoline	On-Road Vehicles	13,384	13,676	12,751	495
Electricity	On-Road Vehicles	106.4	106.4	112.8	4.0
Total		159,023	135,245	43,491	4,025

Notes

¹ Energy use from Table E-1a was converted to units of MMBtu based on energy content to allow for the comparison of total energy use across Alternatives.

Abbreviations

BART: Bay Area Rapid Transit
 BRT: Bus Rapid Transit
 DMU: Diesel Multiple Unit
 EMU: Electric Multiple Unit
 MMBtu: million British thermal units

			2040	-1,835,154	-1,112,024	-1,112,024	-772,724	-196,774

Notes

- ¹ Project and cumulative scenarios for each alternative only differ in the level of on-road passenger traffic.
- ² Vehicle gasoline and diesel demand for passenger vehicles, off-road trucks, and buses is derived from EMFAC2014 daily fuel use in Alameda County for operational years 2025 and 2040.
- ³ BART traction electricity demand calculated from annual total car-miles traveled and an electricity demand factor of 4.51 kWh/car-mile (based on 2006 system-wide traction electricity demand).
- ⁴ DMU idling electricity calculated based on an assumption of 12 min of idling per roundtrip. An electricity demand factor of 0.88 kWh/idle-minute (2008 eBART Phase I Project to Hillcrest Terminal DMU and LRV Comparison) was modified to account for the Project-specific number of cars per train.
- ⁵ EMU traction electricity calculated from annual revenue DMU car-miles and roundtrips. EMU idling electricity calculated based on an assumption of 12 min of idling per roundtrip.
- ⁶ Building electricity consumption at the new Isabel Station was assumed to be similar to the electricity use at the East Dublin/Pleasanton Station and Station Parking Lot. The value shown here represents a three-year annual average from 2012-2014. Electricity with losses were conservatively included.
- ⁷ Additional electricity use is anticipated from the maintenance of BART and DMU/EMU cars. A maintenance factor of 7,060 BTU/mile was obtained from Caltrans Energy and Transportation Systems, Table E-13 (1983) and applied to annual car-miles.
- ⁸ Water consumption includes use at the Dublin/Pleasanton and Isabel stations, the Maintenance Facility, and wayside facilities. Estimates of consumption are primarily based on historical usage at existing and comparable BART facilities, scaled for anticipated level of activity. Energy use consists of upstream electricity to supply, treat, and distribute water and downstream electricity to treat wastewater.
- ⁹ Two electric forklifts will be used at the maintenance yard for the Conventional BART and DMU/EMU alternatives. Horsepower and load factor are industrial averages and CalEEMod defaults, respectively. It is assumed that the forklifts will operate 365 days a year for 8 hours a day.
- ¹⁰ A solar PV capacity of 1,000 kW is assumed for the Isabel Station in 2025, with a 1% annual degradation in performance for every year thereafter. Electricity generation was estimated using the National Renewable Energy Laboratory's PVWatts calculator, available online at: <http://pvwatts.nrel.gov/pvwatts.php>. Electricity generation shown is for a roof-array with default assumptions and weather conditions typical of Livermore, California.
- ¹¹ DMU diesel demand is calculated from annual revenue DMU car-miles. A fuel use rate of 0.725 gallons diesel/mile (2008 East Contra Costa BART Extension Draft EIR) was modified to account for the Project-specific number of cars per train.
- ¹² One 2,500-kW emergency generator will be located at Isabel Station and one 500-kW emergency generator will be located at the Maintenance Facility. It is assumed that operation for routine maintenance and testing will not exceed 24 hours per year for the Isabel Station generator and 50 hours per year for the Maintenance Facility generator.
- ¹³ One shuttle van will be used at the maintenance yard for the Conventional BART and DMU/EMU alternatives. It is assumed that the vans will travel 20 miles per day (7,300 annual VMT) and idle for 40 minutes per day.
- ¹⁴ Two off-road trucks will be used at the maintenance yard for the Conventional BART and DMU/EMU alternatives. It is assumed that the trucks will travel 11 miles per day (8,030 annual VMT) and idle for 10 minutes per day, per vehicle.

Notes

¹ Energy use from Table E-2a was converted to units of MMBtu based on energy content to allow for the comparison of total energy use across Alternatives. Conversion factors from fuel or electricity to BTU are from the U.S. Department of Energy "Fuel Properties Comparison" (2014). Conversion factors of 3,414 Btu/kWh of electricity, 124,240 BTU/gal of gasoline, and 138,490 BTU/gal of diesel were used for this purpose.

Abbreviations

BART: Bay Area Rapid Transit	gal - gallon
BRT: Bus Rapid Transit	EMU: Electric Multiple Unit
Btu - British thermal units	kWh - kilowatt-hour
DMU: Diesel Multiple Unit	MMBtu: million British thermal units
DOE: United States Department of Energy	yr: year

Table GHG-1
One-Time GHG Emissions from Project Construction
BART to Livermore Extension Project
Livermore, California

Emissions Type	GHG Emissions (MT CO ₂ e)			
	BART	DMU/EMU	Express Bus/BRT	Enhanced Bus
Off-Road Vehicles	5,337	2,867	706	92
On-Road Vehicles	5,682	6,591	2,118	189
Total One-Time GHG Emissions	11,019	9,458	2,824	281

Notes:

- ¹ Total construction GHG emissions include contributions from off-road equipment activity and on-road traffic. Off-road construction emissions were calculated based on Project-specific equipment list and usage hours and CalEEMod® (version 2013.2.2) default equipment factors (see AQ Technical Appendix Tables 2 and 3). On-road construction emissions calculated based on the total trips and vehicle miles and the EMFAC2014-based emission factors (see AQ Technical Appendix Tables 3 through 6).
- ² Enhanced bus improvements are included for all alternatives. The bus improvements were conservatively approximated by scaling BART emissions, excluding the Maintenance Facility/Yard, by the relative construction durations (i.e., total BART construction emissions*2 months/48 months). For each alternative, the total emissions is equal to the original scenario-specific emissions, plus the additional approximate emissions from bus improvements.
- ³ Global warming potentials are based on Intergovernmental Panel on Climate Change (IPCC) Fourth Assessment Report.

	Cumulative	-764	-374	

Notes

- ¹ Project and cumulative scenarios for each alternative only differ in the level of on-road passenger traffic.
- ² The CO₂e emission factor for electricity (97 lb/MWh) was based on BART 2017 electricity portfolio projections, which is assumed to serve as a conservative assumption of electricity intensity for Project years 2025 and 2040. This factor was used in all cases except water treatment electricity, which is presumed to use grid electricity. The grid electricity emission factor (293 lb/MWh) is based on PG&E CO₂ projections for 2020 and CalEEMod® (version 2013.2.2) defaults for CH₄ and N₂O. Global warming potentials from the Intergovernmental Panel on Climate Change (IPCC) Second Assessment Report was used in the development of the BART emissions factor, while all other GHG emissions are calculated using the global warming potentials from the Fourth Assessment Report.
